Young People and Technology

How do you listen to music?
Where do you watch movies?
Many kids today use electronic devices for many of their daily activities; doing homework, playing games, and chatting with friends.

Some years ago, most young people used computers to surf the Internet. Some of them talked to their friends using cell phones, and almost everybody watched TV on television sets. Today, a lot of kids make phone calls on their computers. Others watch TV on their

smartphones. For modern kids, it is important that one piece of technology can do many things.

In 2016, 79% of 12-to-17-year-olds in the US had a cell phone. So, why are cell phones so important to young people? Because some cell phones, called smart phones, can do many different things.

Predictions That Came True

Is it really possible to predict the future? Some people say that they can foresee future events, but do we believe them?

- In the past, there were people who made predictions based on their own observations and intuition. Then, many years later, those predictions came true...
- In 1987, the movie critic Roger Ebert said, "We will have high definition, wide-screen televisions... videocassette tapes will be obsolete." How many of you now have widescreen TVs at home?
- In 1968, Arthur C. Clarke and Stanley Kubrick collaborated on the novel and movie 2001: A Space Odyssey. In one scene in the movie, we see two astronauts reading the news on something that looks like a tablet! Even more surprising, Clarke named the device the "Newspad." Does that name sound familiar?
- John Elfreth Watkins Jr. was curator of the Smithsonian Institute. In 1900, he wrote an article called "What May Happen in the Next Hundred Years." He said, "Man will see around the world. Persons and things of all kinds will be brought within focus of cameras... thousands of miles at a span." That's right, Mr. Watkins predicted the existence of something similar to a famous photo-sharing social network—over one hundred years ago!
